Question 1: Anagram Check

Problem:

Write a program to check if two given strings are **anagrams**.

- Two strings are anagrams if they contain the **same letters in any order**.
- The check should be **case-insensitive**.

Example 1:

```
Input:
First string: LISTEN
Second string: SILENT

Output:
Strings are Anagrams
```

Example 2:

```
Input:
First string: HELLO
Second string: WORLD

Output:
Strings are Not Anagrams
```

Question 2: Decimal to Binary Conversion

Problem:

Write a program to **convert a decimal number to its binary equivalent** without using built-in binary conversion functions.

How to Convert Decimal to Binary :

Example 1:

Convert 10 to binary

Step-by-step:
10 ÷ 2 = 5 remainder 0
5 ÷ 2 = 2 remainder 1
2 ÷ 2 = 1 remainder 0
1 ÷ 2 = 0 remainder 1

Binary (reverse remainders): 1010

Input:
Decimal number: 10

Output:
Binary of 10 is 1010

Example 2:

Convert 7 to binary

Step-by-step:
7 ÷ 2 = 3 remainder 1
3 ÷ 2 = 1 remainder 1
1 ÷ 2 = 0 remainder 1

Binary (reverse remainders): 111

Input:
Decimal number: 7

Output:
Binary of 7 is 11
